

gEDA for MS-Windows

The gEDA suite was developed for Linux. Still, it is possible to run its applications on MS-Windows. After significant effort by a number of programmers, the windows version of the major gEDA tools are in pretty good shape. DJ Delorie regularly compiles windows binaries of the tools and offers them [for download](#). Klaus Zipfel took a current version of the binaries and used [Inno-Setup](#) to assemble an installer for MS-Windows:

[geda-20130122.zip](#) (31,5 MB)

[geda-20120716.exe](#) (43 MB), [readme.txt](#), [license.txt](#)

The installer contains: * gaf ("gschem and friends", i.e. gschem, gnetlist, gerbv, gattrib,...) * pcb (the layout GUI) * symbol and footprint libraries of the ElektronIQ * a set of config files that are supposed to make all this work out of the box
